Kenesto
Cloud-Based Product Document Management for Engineers and Designers
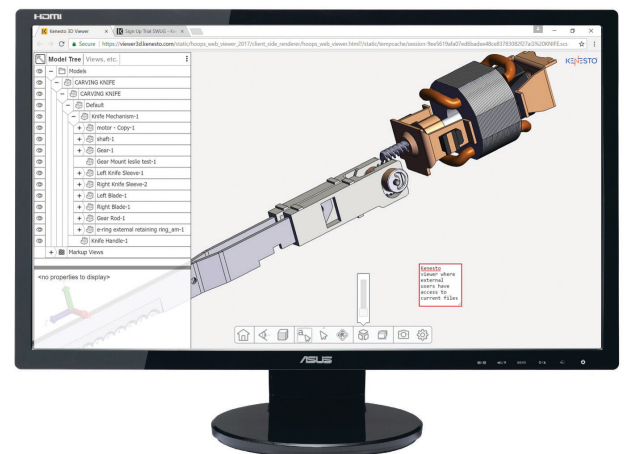

Introduction

Kenesto is a cloud-based product document management solution for engineers and designers developed specifically to handle frequent editing of CAD and other documents. Kenesto solves daily engineering and IT struggles of storage, sharing and collaborating of folders and files, locking for exclusive editing, versioning while collaborating with external suppliers (for free), viewing files and working from remote locations. Using Kenesto users are able to work directly with cloud stored documents.

Kenesto bridges the gap between consumer storage products such as Dropbox and expensive PDM/PLM solutions by delivering a simplified document collaboration environment for teams.

Getting Started

Just drag files to the drive to get started or save your new designs to Kenesto Drive. Files are automatically in Kenesto Web where users are always working with the current file.

Cloud-Based Product Document Management for Engineers and Designers

CAD Collaboration

Kenesto delivers a cloud based CAD document management solution combined with features for engineers that help get their jobs done faster while reducing risk and always working with the current file.
