

Does your organisation really need an XR solution with SOLIDWORKS?

Of course, you do! Ever felt the pain of having to rely on expensive physical prototypes for 1:1 scale visualisation? Or the struggle with communicating design intent to other stakeholders and perhaps your customers? Or deal with ineffective training for your personnel, on newly released products? Extended Reality (XR) technologies bring the power of immersive visualisation and natural interaction to your SOLIDWORKS 3D CAD data. With these two powerful capabilities, users across industry segments benefit from a wide range of use cases.

COLLABORATE

- Immersive meetings
- Design reviews
- Communicate design intent

VALIDATE

- Virtual prototyping
- Servicability
- Manufacturability
- Ergonomics

SHOWCASE

- Product presentation
- Engage customers
- Perceived quality

TRAIN

- Build human actions
- Create sequences
- Interactive training
- Instant feedback

The above use cases are applicable to SOLIDWORKS users in the Industrial Equipment, Aerospace & Defense, AEC, Energy & Utilities, Transportation & Mobility, Marine & Offshore, Hi-Tech verticals.

Are you worried about leveraging value from your XR investment?

Several challenges like handling native SOLIDWORKS data in the virtual environment, ensuring hardware compatibility, long hours spent on data preparation using multiple 3rd party translation tools and the need for custom development and programming using game engines, are typical challenges that prevent you from leveraging value from your XR investment. However, with the right approach to SOLIDWORKS XR, your organisation can benefit from several key value maximizers.

79% Faster time to market with virtual prototyping

91% Reduction in rework and change requests during engineering

47% Savings in travel time and costs through virtual collaboration

3.5x Improvement in customer focus with human centric engineering

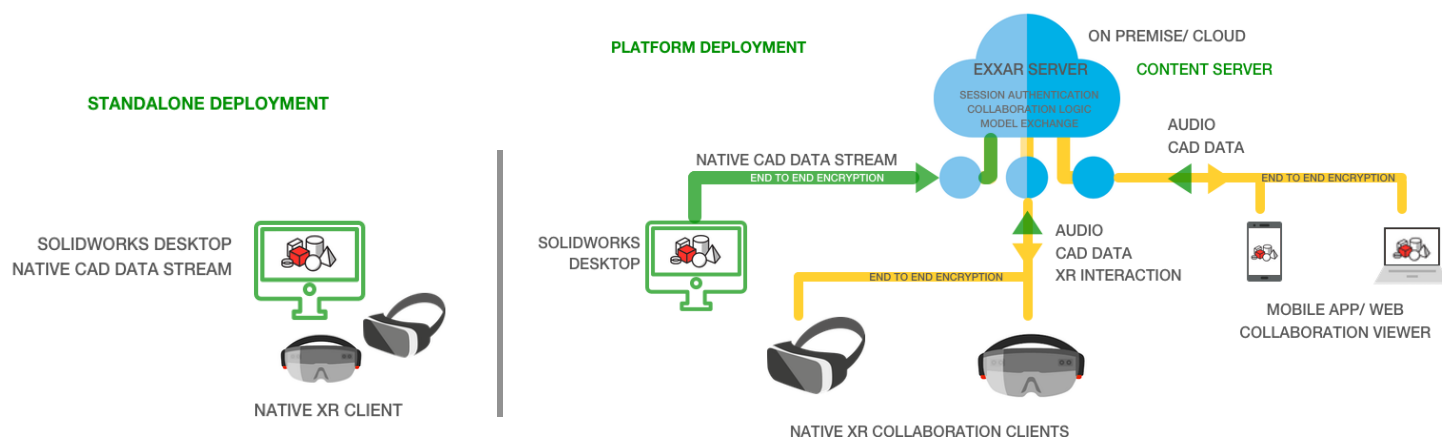

XR Works for SOLIDWORKS

Look for the following in your XR evaluation.

- Easy to use, scalable platform
- No data export/ import challenges
- Cloud based collaboration
- Enterprise grade data security
- Great user experience
- Zero learning curve
- No programming requirements

Use Cases

Return on Investment

Are you struggling to get your SOLIDWORKS data into your XR hardware?

With Exxar, SOLIDWORKS users can instantly stream their data into an immersive workspace, using just about any type of XR hardware. Available as a standalone variant and scalable as an enterprise SAAS platform, Exxar helps reduce time to market, save travel costs and minimize design and project rework using Extended Reality technologies. SOLIDWORKS users can maximize value from their XR investment, by using Exxar across the enterprise, for your collaborative design review meetings, engineering validation and other downstream processes like product marketing and user training.

** All licenses are available in monthly, annual subscription and Enterprise SAAS options*

Exxar can be deployed on a wide range of hardware configurations. From portable mobile and desktop HMDs to fully immersive CAVE displays, Exxar can be used on standalone devices, for single users and between multiple of these hardware in collaboration, for geographically dispersed teams. Get in touch with our global partner network for your requirement!
With Exxar, XR just works for SOLIDWORKS!

Configuration

MOBILE

Non-immersive viewer

Mobile VR, AR

Single user

Unlimited scalability

HMD

Fully-immersive, Portable

VR, MR, AR HMD

Single user

Scalable as per CAD seats

POWER WALL

Semi-immersive, Fixed

Single channel 3D stereo projection

Multi-user

Cross domain review

CAVE

Fully-immersive, Fixed

Multi-channel 3D stereo projection

Multi-user

Multi-application review
