**DynamicList** Use linked drop-down lists in the data map

DynamicList allows you to enhance your PDM data cards with linked choice lists. The data source can be an Excel file, a csv file or a query in a database.

Document Informatio	n Designation Comments	📑 List of group: Training	g CSV —		×
( ) ( ) ( ) ( ) ( ) ( ) ( ) ( ) ( ) ( )	Sample DynamicList	Family	К07	~

### **Project management**

#### **Key features**

- > Data that drives drop-down menus :
  - Text file
  - Excel or CSV file or each column corresponds to a level
  - SQL request
- Multiple selections for the latest drop-down menu

Key	differences	with PDM	
i c y	unicicicus		

Create smart choice lists to fill in data cards

With DynamicList, you can easily and without any risk retrieve information from your ERP and fill in your data cards.

#### SerialNumbers

Create unique serial numbers per project by combining variables with a counter

SerialNumbers allows you to value a variable of the card automatically by archiving documents with a counter number and card variables.

It automatically creates counters by project or type of document.

🜔 Defin	ition of serial number	
Name:	Training_SerialNumber	
Value:	Project Number - 📰 Desc - 🔟 Project	+
Variable:	SerialNumber	~

🌯 @ 🏳 Def	ault	
Document Informa	ation Designation Comments	my PDM tools
Doc Number:	01 Revision:	
Description:	SerialNumber-Gear	
Project Number:	2018-11	
Project Name:	SerialNumber	
Article code	2018-11-SerialNumber-Gear-01	File Name: Cap-20.SLDPRT

### **Project management**

#### **Key features**

- Creating a custom serial number on data cards
- Creating a counter per project based on the variables of the folder maps
- Create a button in the data card to increment the meter or recalculate the conccatenation of a variable with the counter
- For myCADtools users, the ability to use the same counters set in SmartProperties

Key differences with PDM	<b>()</b>	
Creating a serial number	×	$\checkmark$
Link a data card variable to the counter	$\checkmark$	
Create buttons to increment the counter and insert it into the value of a variable	V	

# Value your data cards

With SerialNumbers, automatically create counters by project or document type.

### CopyLink

Copy PDM hyperlinks from selected documents in the vault

Envoyer

Hello,

Please fi

**Project management** 

CopyLink allows you to copy PDM hyperlinks (open, explore, etc.) from selected documents in the vault.

You can set a template to customize the format of the information to be copied.

Create a table with links and properties of data cards	$\checkmark$	
Send an email automatically with the information of the selected files	$\checkmark$	
Copy the folder link	$\checkmark$	

#### **Key features**

- Creating a link for the following actions :
  - Open /Open document folder
  - Get the latest version of the document
  - Get the document history
  - View document properties
- > Defining a table containing for each file :
  - Data map variables
  - Links

# Improve your communication

With CopyLink, save time in communicating with your organization by easily sending file information to be changed or validated.

#### DocBundle

Easily export all the elements needed for manufacturing

DocBundle allows you to create a multi-format, PDF or multi-format documentary bundle containing all the documents needed to make a project. It also generates a folder structure to group certain files by type (sheet metal, plan, parts,...).

This simplifies the generation and dissemination of information around your projects.

Documents bundle	
★ # # 1 0 2 2 2 1 1 1 1 1 1 1 1	- 🍂 🚖 🐵 🔚 🐑
The PDF	
D DXF	
Technical document     Tools presentation	
B Product sheet	

Key differences with PDM	<b>()</b>	Ļ
Creating a documentary bundle of all files related to a project	×	
Personalization of the documentary bundle (pagination, watermark, guard page,)	×	
Generation of bundles by a SOLIDWORKS PDM task	V	

### **Project management**

#### Key features

- Bundle created automatically when changing state
- PDF documentary bundle (CONVERSION of SOLIDWORKS and Office files, etc.)
- Documentary bundle in the form of folders (zip): Creating folders (groups) classifying files by type
- Automaticly adding files to groups depending on the type of document or ownership of the file

# Simplify the generation and dissemination of information

With DocBundle, save time by exporting all manufacturing-related elements to your assemblies without any interaction with users when validating your assemblies.

PDMRebuild allows you to update your SOLIDWORKS assemblies and layouts with a planned PDM task following parts modification.

#### **Project management**

#### **Key features**

- Automatic execution of PDMRebuild to archive documents in PDM.
- > Search for use cases of selected files
- Rebuilding documents with a planned PDM task

# Key differences with PDMImage: Comparison of SOLIDWORKS employment cases when changing a documentImage: Comparison of SOLIDWORKS employment cases when changing a documentAssemblies and layouts always up to dateImage: Comparison of SOLIDWORKS employment cases when changing a document

# Make it easier to update data and documents

With PDMRebuild, don't worry about taking your changes into account and updating documents.

#### **DocPublication**

Generating PDF documents automatically when validating files in SOLIDWORKS PDM

DocPublication allows you to automatically generate your files in a neutral format when validating your documents.

This tool can process native SOLIDWORKS, Autocad, Microsoft Office and eDrawingscompatible formats.

Key differences with PDM	<b>()</b>	
Export of Microsoft Office files in PDF format	$\checkmark$	$\checkmark$
For multi-layered layouts, generate one file per layer	$\checkmark$	
Generation with eDrawings	$\checkmark$	
Generation with DraftSight Premium (not SOLIDWORKS) for DWG and DXF files	V	~
Moving, deleting, taking version of old files generated	V	

# Key features

my DocPublication

Dwg (\*.dwg)(PDF (\*.pdf)

Export Options

Type of generation SOLIDWORKS

- Opportunity to choose conversion format (PDF, TIF, IGS, ...) by document type for SOLIDWORKS files
- Storage of generated PDF documents, in the vault or out of the vault with management options for older versions
- Defining the name and location of documents with variables
- Opportunity to provide or add variables to update in the data map of generated documents
- > Delayed processing with a planned task

# Gain flexibility

With DocPublication, you'll be more flexible and adapt the conversion of your files to your company's requirements

Produce

#### **TaskActions**

Apply multiple myPDMtools actions in a single SOLIDWORKS PDM task

TaskActions allows you to merge together multiple myPDMtools actions on your files when changing document status. For example, you'll be able to create a custom serial number, name documents, manage your review tables, convert your documents, etc.

- Tools to change the variable values of PDM cards with TaskProperties
- Converting files with DocPublication
- Manage review tables in SOLIDWORKS layouts with RevisionTable
- > Launch a myCADtools Integration project
- Renaming documents

With TaskActions, increase flexibility in naming your documents and update the SOLIDWORKS plan review table and then publish PDF documents when postings.

Produce

**RevisionTable** Automatic SOLIDWORKS update review table

RevisionTable allows you to create or update the review table automatically when validating documents in PDM.

General tolerance:			160	-Bearing		50-40

 $\checkmark$ 

 $\checkmark$ 

Key differences with PDM

Automatic management of the review table (number of lines, latest changes)

Automatic filling of the review table

#### **Key features**

- Creating a review table
- Using PDM variable values to inform the SOLIDWORKS review table
- Managing the number of table lines and the order of insertion
- > Auto-trigger when changing status

Automate the creation or **(** updating of tables

With RevisionTable, save time on filling review tables and use information from PDM to supplement information from SOLIDWORKS.

#### **DocPrinter**

Automatically print a list of SOLIDWORKS documents to printers based on formats

DocPrinter allows you to automatically print a list of SOLIDWORKS documents when changing the status by distributing prints to different tracers printers based on the size of the formats.

Or Define the size	A4	~	
Printer		Scale printing	Orientation
\\vv-impressio	on \Charbonnieres - Bat. 28 - 1er - C 🗸	Scale to fit	O Landscap
Color	Properties	Customized	O Portrait
	Properues	100 🗘 %	Auto
Memori	specific printer	101 Cach 3120	
5			

#### **Key features**

- Triggering printing in the life cycle
- Line thickness management table
- Automatic distribution of prints on different printers based on formats
- Creating custom properties for printing

Key differences with PDM	<b>()</b>	A SOLDAWAY
Automatic printing of a bundle of plans on one or more printers depending on formats	×	
Managing document properties when printing	×	

# Make printing tasks easier

With DocPrinter, save time printing SOLDWORKS layouts and don't ask any more questions thanks to the power of PDM workflows and DocPrinter's intelligence that automatically sends the document to the right printer based on the format.

Produce

#### PDMMessage

Sending custom notifications manually or automatically when changing status

PDMessage allows you to format message templates and then notify users.

It can be used from other myPDMtools tools (e.g. Copylink) or automatically during a state change via the use of PDMseage in PDM tasks.

The message will consist of an introduction, a table containing the metad data of the files and a conclusion.

Recipients by	r a condition
If	E SendNotification
Equal to	~ <u>1</u>
То	approbateur@visiativ.com

#### Key features

- Personalizing notifications
- Setting recipients automatically based on rules
- PDM or email notification via SMTP

🎜 D	o Transition 'Release Documents'	
Chang	e state on files:

#### **Key features**

– 🗆 X

- Consolidating documents
- Viewing a single data card for all documents

#### Key differences with PDM

Valorization of PDM metadata on a batch of documents from a PDM data card

 $\checkmark$ 

With PDMPropertiesCard, your users can easily and error-freely add information from a PDM data card over multiple files.

#### PDMReport

Analyze SOLIDWORKS PDM databases with pre-defined queries

PDMReport allows the administrator to set up several types of reports in the myPDMtools interface. Users will then be able to use them from the pop-up menu.

PDMReport	
€ C × ↔	
Reports from menu     Report     Report     Report     Report     Report     Report     Report     Reports files mappings     Duplicate files in vault     Scheduled Reports	Selecting queries  Al operations for a specific date and user  Checkout files on a specific machine  Rollback files in vauit  Duplicate files in vauit  Deleted files on specific folder  Where are used the variables in the vauit  Revisions history  Documents was in state  System history  Project size on the disk  hinterted and explicit groups folders permissions in th  Therefore and explicit groups folders permissions in vary
	<

Key differences with PDM	<b>()</b>	A SOLDANDA
Create planned reports	$\checkmark$	
Create reports from a pop-up menu	$\checkmark$	

#### **Key features**

- List the maps of variables used in the safe
- List all files extracted on a specific workstation
- List restored files, duplicate files, deleted files
- > Get system history, including vault updates
- Planning report exports from PDM tasks
- Personalizing variables to display in results

With PDMReport, you can easily analyze your documents in PDM and export the results to Excel format.

Manage

CacheRefresh allows you to perform operations on the local cache and archive files in the PDM vault.

CacheR	efresh	<b>(</b>
	Get the current versions	
_		

#### **Key features**

- Empty the local cache
- Get the latest versions of the files
- Archive and keep extract
- Destroy deleted files
- Triggering actions from the Windows task planner

Key differences with PDM	<b>()</b>	A SECOND
Empty the local cache, get the latest versions	$\checkmark$	$\checkmark$
Define actions related to each workstation	V	
Triggering from a Windows system event	$\checkmark$	

With CacheRefresh, save your document changes in PDM on a daily basis while keeping hold on upcoming changes by exporting the extracted file.

Manage

PDMCheck allows you to analyze the bill of materials to verify that they do not contain deleted documents or with inconsistent states.

#### Key features

DocBundle

Dynamicl is

- The bill of materials contains state inconsistencies, deleted documents, etc.
- Check whether the files in a bill of materials are at the latest version
- Control file names of documents with information
- File names contain prohibited characters
- A 3D document in a valid state is not associated with a planing in a defined state

With PDMCheck, check that on a given project, validated assemblies do not contain deleted documents or invalid states.

Manage

#### PDMViewer

Viewer eDrawings displaying SOLIDWORKS PDM data card information

**Be informed** 

PDMViewer displays information in PDM data cards when the user clicks on a component in the viewer's graphics area.

Number of	lines 3 🔹	
Line 1 Line 2	File name:  File Folder name or fil  Project name: File Project Name
